

Oppose “Conversion” Therapy Ban Bill

Serious Harms of Censoring Change-Allowing Therapy

Dear Legislator,

PLEASE CONSIDER THIS EVIDENCE: Right to Happiness

(1) **SCOTUS says professional speech has the same 1st Amendment rights as other speech.** It abrogated 9th and 3rd Circuit Ct decisions on which bans have relied. **New York City repealed its own ban rather than lose at SCOTUS.**^{1 2 3}

(2) A Kaiser-Permanente study found **psychiatric disorders, often with hospitalization, led up to onset of gender non congruence in 66% of adolescent cases.**⁴ The World Professional Assoc. for Transgender Health said, when psychiatric disorders cause gender dysphoria, it does not recommend gender affirming treatment.⁵ Banning talk therapy leaves little help.

(3) A gene study of nearly half a million people said **LGB behaviors are influenced some by genes but largely by early experiences,**⁶ and research and professional consensus agree that non congruent gender identity is also caused by a mixture of biological and environmental influences^{7 8}—**like other traits therapists help people diminish or change every day.**

(4) **The *APA Handbook of Sexuality and Psychology*, which the American Psychological Association declared authoritative,⁹ and research, say family factors^{10 11 12} and childhood sexual abuse^{13 14} may be causal factors** in having same-sex partners for some, and family pathology^{15 16} may be a causal factor for transgender identity. Affirmative therapy requires affirming LGBTQ feelings or behaviors caused by trauma. It denies harmful underlying causes for some. Treating underlying causes may shift/change LGBTQ feelings. Failure to treat^{17 18} can lead to mental health disorders and suicide.^{19 20} Contemporary, ethical^{21 22} therapists who are open to change use evidence based trauma interventions and well established practices used by therapists worldwide. There is no reason why this therapy should be more harmful or less effective than any other therapy. Some clients report their depression²³ or suicidality²⁴ subsides from this therapy. A therapy ban will deprive patients of much needed therapy.

(5) The *APA Handbook* and robust research internationally have established that same-sex attraction, romantic partnerships, behavior, and identity all commonly shift or change for adolescents and adults.^{25 26 27 28 29 30} **They can change.**

(6) Childhood gender dysphoria overwhelmingly resolves by adulthood if minors are supported through puberty.^{31 32} Living as the opposite sex and puberty blockers stop natural resolution.³³

(7) **Sex hormones and surgeries lead to 2-2.5 times higher rates of deaths from cancers and heart disease, 19 times higher rate of completed suicides.**^{34 35}

(8) **Sterilizing or castrating minors with hormones or surgery should be illegal.**

(9) **One of the most comprehensive reviews ever conducted on over a century of change-allowing therapy research, including studies published by APA members in APA peer-reviewed journals, shows some people change their sexual attraction and behavior through a variety of safe and effective, non-aversive, mainstream therapy methods.**^{36 37}

Oppose “Conversion” Therapy Ban Bill

Serious Harms of Censoring Change-Allowing Therapy

(10) The APA task force: **(i) Said no research meeting scientific standards shows today’s change-allowing talk therapy to be harmful or ineffective or gay-affirmative therapy to be better.** It’s still true.^{38 39} **(ii) Did *not* declare change-allowing therapy unethical.** **(iii) Said aversive methods have not been used for 40-50 years.**⁴⁰ **(iv) Said it based its recommendations on anecdotal evidence, not on research that met its standards.**⁴¹

(11) **A number of professional organizations oppose gender affirmative treatment⁴² and support change-allowing therapy.⁴³ A consensus of professional organizations does not in fact exist.** The scientific process, not legislative fiat or activist lobbies in professional guilds, should resolve these scientific questions.

Everyone has the right to walk away from sexual practices and experiences that don’t work for them. Everyone should have the right to live the way that brings them happiness.⁴⁴

⁸ Identical twins share the same genes, prenatal hormones, and number of older brothers. Identical twins are always the same sex. Sex is 100% determined by genes and prenatal hormones. But if one twin comes to have LGB experiences, discordant gender identity, or discordant gender expression, the other usually does not. This shows that influences other than genes or prenatal hormones are predominant causal factors.

¹⁰ Baams L. (2018). Disparities for LGBTQ and gender nonconforming adolescents. *Pediatrics*, 141(5): e20173004. <http://pediatrics.aappublications.org/content/early/2018/04/12/peds>.

LGBT youth were more likely to have grown up with household dysfunction defined by parent incarceration, problem drinking, or abuse of illegal or prescription drugs. This is included in both the household dysfunction and polyvictimization groups.

But not significant for Q youth, p. 3.

LGBTQ youth more likely to experience psychological and/or physical abuse that may have included witnessing domestic violence (p. 4) and polyvictimization that adds household dysfunction and sexual abuse.

Gender nonconforming adolescents, especially bisexuals, had experienced more types of abuse. Transgender identity, especially for boys, was associated with more kinds of adverse experiences (household dysfunction, physical and/or sexual abuse, and polyvictimization, p. 6).

Sexual orientation and gender identity are generally confounded with gender nonconformity. However, this study specifically measured gender nonconformity separately and controlled for it, making it possible to reveal that the association between LGBTQ youth and adverse experiences is not simply explained by gender nonconformity. pp. 6-7.

Gender nonconforming adolescents (especially bisexual and transgender identified) had experienced more types of adverse experiences. However, gender nonconformity was not the only explanation for adverse experiences (p. 7).

³⁸ This small study near San Francisco, purporting to show harm from “conversion therapy,” looked at only parent-initiated efforts, by surveying adults who currently frequent LGBT bars, and asked about their adolescent experiences with regard to “conversion therapy.” By research design, the study excluded any youth who may have changed through therapy since they recruited study subjects only from LGBT-supportive venues. The survey did not study client-initiated therapy at all. It has nothing to say about it.

Serious Harms of Censoring Change-Allowing Therapy

⁴⁰ APA Task Force on Appropriate Therapeutic Responses to Sexual Orientation. (2009). Report of the Task Force on Appropriate Therapeutic Responses to Sexual Orientation. Washington, DC: American Psychological Association.

40-50 yrs—since about the 1960’s or 1970’s: pp. 22, 82.

⁴¹APA Task Force (2009).

No causal evidence of harm: 42, 82 91. Reported research participants (from over a century of research) reported they changed sexual attraction or behavior, and some (from a small number of studies) said they were harmed: 49, 85. No studies reporting harm met task force scientific standards. The APA task force used the reports of harm as anecdotal evidence and based its recommendations on them. The researchers erroneously believed sexual attraction does not change. The *APA Handbook* corrected that 5 years later, but the *APA Handbook* erroneously said contemporary therapists are still using behavioristic (potentially aversive?) methods.

⁴² Multiple medical groups throughout the world, including the [Royal College of General Practitioners](#), the [Swedish Pediatric Society](#) and the [Royal Australian College of Physicians](#) have warned against these "gender affirmative" interventions.

- American Association of Christian Counselors (AACCC Code of Ethics, 2014, 1-120f, 1-330, 1-340, <https://www.aacc.net/code-of-ethics-2/>),
- Association of Christians in Health and Human Services.

⁴⁴ Here are common reasons people want change-allowing therapy: (1) They identified as LGBTQ and had LGBTQ experiences, but ultimately they did not find it fulfilling. (2) They feel their LGBTQ attractions or behaviors were caused by trauma, and they want the right to heal. (3) They want to live according to their beliefs or ethics that bring them happiness. (4) They want to save their marriage and family and go on raising their children as a full-time mom or dad. Or they aspire to procreate children with a future spouse and raise them together. Those who seek therapy, not the state, should choose who gets therapy and for what reasons. We urge the state not to support discrimination over who can get help and what help they can get.
